

Retail Washroom Refurbishment at Merseyway Shopping Centre, Stockport

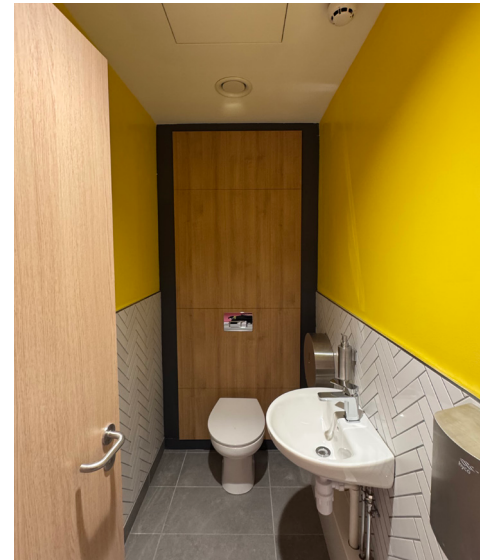

Client: Merseyway Shopping Centre | Entertainment & Retail

Stockport, England

Overview

At TBS Fabrications, we recently completed the retail washroom installation of bespoke toilet cubicles and IPS wall panels at Merseyway Shopping Centre. Working alongside the main contractor, Kier Construction, our team delivered a high-quality public washroom refurbishment for both male and female facilities, all while the shopping centre remained fully operational.

Our role was to ensure that the washroom installation ran smoothly, coordinating closely with the TBS Amwell design and manufacturing team to translate their washroom products into a durable, visually striking finished public toilet facility.

Client's Brief

The shopping centre required a washroom installation that could withstand heavy daily footfall, deliver a modern aesthetic, and allow easy maintenance access for facilities management teams. The challenge was to upgrade the public washrooms in a live retail environment, where minimising disruption and maintaining safety was paramount.

Our Solution

We approached the project with a focus on communication, precision and efficiency to provide a quality washroom installation. Using TBS Amwell's tailored Solid Grade Laminate Splash Tall toilet cubicles and matching IPS wall panels, our team installed a system designed to be both durable and contemporary.

Working alongside Kier Construction, we carefully planned the installation to fit within the shopping centre's operational schedule, ensuring minimal disruption to visitors and retailers. Every element, from the toilet cubicles to the IPS panel system were installed to high-quality standards, supporting long-term performance and ease of maintenance.

Key Products Installed:

SGL Splash Tall Toilet Cubicles

TBS Amwell's Splash toilet cubicles were installed, manufactured from 13mm Solid Grade Laminate, chosen for its impact and water resistance, and durability for high-traffic commercial washrooms. These cubicles offer a sleek, modern appearance while providing practical cleaning access with the 100mm floor clearance. Finished in Summer Oak and Pepper, the design balances warmth and contemporary style, enhancing the overall visitor experience.

IPS Wall Panels - PDQ Panel & Frame

We also installed TBS Amwell's PDQ Panel and Frame integrated plumbing system (IPS), concealing pipework and services behind a neat, robust surface. The IPS wall panels arrived on site pre-fitted to a steel frame by the TBS Amwell factory team, reducing installation time by 50% compared to traditional timber framing. This approach helped the project stay on schedule while minimising disruption and on-site panel cutting, which was particularly important as the shopping centre remained open to visitors throughout the works.

The IPS panel system was supplied with integrated access panels, providing the shopping centre's facilities team straightforward access to plumbing without disturbing the finished surfaces. This solution combines visual appeal with practical functionality, ensuring the washrooms remain low maintenance over the long term.

The Outcome

The completed public washrooms now provide durable, low-maintenance, and visually appealing toilet facilities for a busy retail environment. Our precise installation of the Solid Grade Laminate toilet cubicles and IPS panels has ensured a seamless finish that meets the clients' expectations for both design and performance.

Feedback from Kier Construction was extremely positive, highlighting the quality of workmanship and professionalism of our washroom installation team. This project demonstrates how TBS Fabrications can deliver high-quality commercial washroom installations that are both functional and aesthetically impressive, even in live retail environments.
